

FOCUS: MOLD REPURBISHMENT SERVICES

Dynamic has a 50 year history of building high productivity injection molds. We provide a complete range of tooling support services, from Design-for-Manufacturing part analysis to Comprehensive Flow Simulation to Scientific Sampling and Process Development.

Our privately held company has over 110 dedicated team members with 11 participating in our apprenticeship and intern programs. We work closely with our region's educational institutions to progress manufacturing growth and provide career opportunities to our community.

We bring our decades of performance success to support our customers requiring expert and reliable mold refurbishment, repair, and preventive maintenance services

- Dedicated Production Mold Services Team - project management, toolmaker, designer, process engineer, metrologist / quality engineer, equipment, and technology resources
- Ability to accommodate large molds / high cavitation / multiple inserts
- Reverse Engineering Services for cases when accurate data is not available or no data is available
- Quality Lab with Structured Blue Light Scanning, CMM, Vision, and Manual Inspection capabilities
- Complete scope of machining processes - including hard-cutting / wire & sinker EDM / 3D metal print
- Manifold testing, inspection, and preventive maintenance
- Thermocouple / wiring supplies in stock
- Close relationships with leading coating service suppliers
- Vast experience with medical / healthcare tooling - (areas of lubrication, medical / food grade lubricants)
- 10 injection presses on-site (22 to 900 ton) for mold functional & scientific sampling and process development
